Main Idea

The Neighborhood Council App is a community-driven platform that enables local residents to manage neighborhood issues without government involvement. It allows users to identify their zones using maps, report complaints or suggestions, form councils, and participate in decision-making through voting. The system promotes transparency, collaboration, and efficient conflict resolution within small communities.

Main Objectives

- Provide a platform for residents to report complaints and suggestions related to neighborhood issues.
- Enable formation of local councils or committees to resolve conflicts through a structured process.
- Ensure transparency in funds, expenses, and project progress.
- Enable residents to elect councilors democratically to represent their neighborhood and make collective decisions.
